Stage Two Child Studies
Special Study; Introduction

‘Are young girls being encouraged to grow up too quickly?’

Children are innocent, naive beings. They have a simple view of the world, and their minds are easy to please. Dressing your child up in provocative clothing and letting her date at too young of an age will not help her mature in other ways, such as with school work and getting a job, it could hinder both of these more important things.

Scope of the study
The aim of this investigation is to investigate whether young girls are being encouraged to grow up too quickly. This refers to any action, from any source, which pushes children to do anything that is above their physical or mental maturity level.

The focus questions that have been used to guide the study and structure the discussion are:
1. How are young girls being encouraged to grow up too fast?
2. Who is promoting and why?
3. What role does the media play?

Methodology
A range of primary and secondary sources were used to investigate the topic. These included:

Primary sources:
- a survey distributed to 10 parents and 10 peers in order to gain a varied range of opinions on the matter.
- use of the internet to research up to date secondary information from many different sources.
- own observations of young girls when out in the public, such as their behaviour and how they are dressed etc.
- photographs.

Secondary sources:
- magazine articles.
- episodes of
- newspaper articles relevant to the topic.
Stage Two Child Studies
Special Study; Discussion of Findings

‘Are young girls being encouraged to grow up too quickly?’

1. How are young girls being encouraged to grow up too quickly?
Young girls are being encouraged to grow up too quickly in many different ways. The
focus of this sub-topic was to find out how.

Of the parents and peers surveyed in the study, a large majority agreed that young
girls are being encouraged to mature too quickly.

These figures indicate that more of the parents surveyed believe that young girls are
being encouraged to grow up too quickly than peers.

Of the parents that said yes, the reasons given as to how it was happening were the
media, peer pressure and parents not stopping it. Of the peers surveyed, the reasons
given were the media, marketing, parents, peer pressure/social influence, and letting
or encouraging children to look up to people much older than them. This shows that
the people who didn’t have a child had some different views on the reasons for
young girls being encouraged to grow up too quickly than the people who had
children did.

An interesting fact that I found was that while half of the parents revealed that they
let their daughter wear makeup (of any kind) under the age of 5, only three did not
believe that parents were letting their children do things that are not age
appropriate, such as wear makeup or provocative clothing when they are too young.
If such evidence has been presented, it would be interesting to then see how young
these parents believe a child has to be before they are ‘too young’ for makeup.
One of the secondary sources I used, stated that the author's seven-year-old daughter 'freaked me out a whole different way – by begging for a bra.' The child argued that two of her peers had them. This is a good indication of the social influences that the child would have observed, and then decided that she too wanted to be like the other girls in her class. This is one of the reasons that young girls are being encouraged to grow up too quickly, because they are being pressured by their peers to mature.

The author goes on to state that a local children's store had 'a whole assortment of flirty bras and panties perfectly sized for second-graders.' This shows the intelligence of the marketers, because by marketing a range of child's lingerie, the children may pressure their parents into buying them new and most likely more expensive underwear, because they feel it will make them seem more grown up and mature. Some parents do not have the knowledge to realise that their daughter's are too young to be wearing lingerie as it sexualises them, makes them more 'attractive' which is something they should not need (or want) to be.

Another reason that both the surveys and the secondary sources showed was that some parents wish to be 'more of a friend than an authority figure', which means they essentially let the daughter do whatever she wants.

The most talked about factor in the encouragement of young girls maturing too early is the media, but this will be the main focus of my third sub-question.

---

2. Who is promoting and why?
The focus of this question is to find out exactly who is encouraging the young girls to
grow up too quickly, and why.

The surveys distributed show that the ten parents surveyed believe that marketing,
media and parents are the three main factors promoting the early maturation of
young girls. Figure 1 below shows that the parents listened when asked
to write down as many reasons that they could think of that are promoting the early
maturation of young girls.

![Reasons Parents Wrote for 'Main Factors
Promoting Young Girls']

Figure 1

Promotion of the products such as the children’s lingerie, mentioned in the last topic,
make-up products for young girls and provocative clothing is high. My personal
observation shows pictures of young girls being made-up, wearing sparkly clothing
and short skirts, generally in places that young girls are more likely to see such as toy
shops, and children’s clothes shops. The marketers believe that to sell their products
they need to idealise these products, make the advertisements seem mature and
grown up. This seems to be what young girls wish to be; more mature.

‘Companies noticed girls’ love for ultra-feminine programs and their product tie-ins,
and played it to the max.’ This means companies noticed younger girls’ fascinations
with teenaged characters, and decided that they could market from them to seem
even more idealistic, because they knew they could profit from merchandise tied in
to these television shows.

and merchandise is hard to avoid when walking through a child’s store. It seems that no
matter what you are after, you will be able to find one with a TV star’s face on it. The
character

is fourteen, and yet the target audience is around 8-12.

http://www.familycircle.com/teen/parenting/sex-talk/growing-up-too-fast/?page=2
(Tues 13th Sept)
Young girls look up to older people as their role models, and when these role models do things that are appropriate for their age, such as dating or wearing make-up, the younger girls believe that they can do it too. Companies that market their products towards young girls noticed this and use it, because it doesn’t matter to them that the younger girls are starting to do things out of their emotional and physical maturity levels.

There are many theories as to why the media is pushing young girls to grow up too young, but the main and most logical one that I came to is that they get younger actors and singers out of it, and they look older than they are. It is a constant competition for the record companies, model scouts and acting scouts to find younger, more talented musicians/singers/models/actors/actresses. The media needs the young girls to have a higher maturity level than normal, because otherwise they may not be able to handle the pressure of whatever profession they are entering. It helps the media for the younger people to be more mature both physically and mentally, because then they can handle being in the spotlight and the media will not get blasted for writing sometimes horrible things about them.
3. What role does the media play?
The media plays possibly the biggest role in the encouragement of young girls to grow up too quickly.

'So many children are exposed to subject matter beyond their years, and then go off emulating these things in their day-to-day life.'

As the above writer said, young people are exposed to many things beyond their years. These are things like make-up, provocative clothing, social networking, phones, dating and even sex. When such things are presented to young girls, they feel as though they should be owning/wearing/doing all these things, when they are too young to be, just because the girls the media proposes to them as role models are doing it. They are being pushed to worry about body size or shape, the clothes they wear, how much money they have and things like this, instead of more important things.

Recently in places like Hollywood there have been the beginnings of an unspoken competition of who can find the youngest actors and actresses with the most talent, as such. There has been a sudden boom of younger actresses. The fact that young girls are being pressured to mature earlier helps the producers, because then they can get even younger actresses that have the mental maturity to handle all the attention and work, because if the younger actresses didn’t have the mental capability to handle the stressful work-load there would not be a good outcome.

The media tends to particularly focus on celebrities’ daughters, as much as their parents try to shield them from it. When young girls see pictures of wearing heels and drinking at age 3, and media coverage of child beauty pageants such as , they want to mimic these girls. The media also makes girls feel inadequate at much too young of an age, by showing them pictures of only the girls with the highest aesthetics, which makes more average looking young girls feel bad about themselves.

---

Conclusion

The findings of my research clearly indicate that young girls are being encouraged to grow up too fast.

Young girls are being encouraged to grow up too quickly in many different ways. Parents, the media and marketing are the biggest factors in girls maturing too fast. The parents want to be more of a friend than a parental figure. The media is encouraging young girls to mature by showing articles and news clips of celebrity young girls that are allowed to do things that are too mature for their age, such as wear heels and makeup.

The three main things promoting the early maturation of young girls are also marketing, media and parents. The media is promoting maturity in young girls as it benefits them because they get big news stories of the controversy of 'sexualising' the young girls. The parents are benefited as it leaves them little responsibility over their child because their daughter believes she is mature enough to handle everything herself, when in reality she probably isn't. Marketers are benefited because they get millions of dollars of profit from promoting young girls being more mature, because the younger people believe girls are mature enough to wear provocative clothing and makeup, the younger they can market these things towards them.

When young girls are shown images of things that are above their maturity level in the media, they wish to emulate these things in their lives, even if they are too young to be doing so.

Researching this topic for Child Studies has improved my understanding of why young girls are being encouraged to grow up too quickly. My research helped me discover the main reasons why, and what the role of the media is, and I now know a lot more on the topic.

10 surveys distributed to peers.

10 surveys distributed to parents.
Additional Comments

Assessment Type 3: Investigation (B)

- A contemporary topic relating to children has been selected.
- Guiding/focusing questions have been included.
- Both primary and secondary sources of information have been clearly identified in the investigation and in the bibliography. Sources of research link to the topic.
- The research has been analysed throughout the investigation. At times the analysis is well-considered while at other times it is some considered analysis. So both the B and C grade bands have been represented. In a couple of places the analysis is perceptive. This is only in a few places and overall the critical analysis tends to be well-considered.
- The information used tends towards relevant and appropriate. Sources of information have been appropriately acknowledged.
- The literacy and numeracy is effective. There is mostly appropriate terminology used.
- The evaluation varied between well-informed to informed. The investigation focused on child development.
- This investigation has some A, B and C features about it. There is clear evidence across the grade bands in a range of the features.

On balance, the investigation is a B grade.
